10/03/2016 – (CINT Commander II v1.40 – CINT Satellite v6.18)
This update fixed several issues, including the proper path references when using pretext mode. Focus was placed on the handling of the Speakerphone controls. The sensors button (not yet implemented) has been converted to a Force Hang-up button. This function will be available when exiting speakerphone mode and will help "pop" the Tactical Phone back on hook if it fails to receive the hang-up FSK command. I also streamlined some of the MP3 Encoder code to appease slower laptops. It contains numerous upgrades, additions and fixes.

The Satellite Software was also updated to v6.18. It received fixes in path assignments also along with an improved data error handler.

06/02/2016 – (CINT Commander II v1.36 – CINT Satellite v6.16)
This update fixed several issues, including when reloading a paused incident (NPP Report was not re-loading correctly). It also has many functional additions. You can now optionally set the network server to come on automatically at the beginning of an event. You can export and import all program settings (including personnel list). It includes a Hot Key data mining function which allows you to generate a report for each of the dynamic hot keys. It has 3 "Others on Scene" tracked fields for personnel management and records keeping. The Satellite software (v6.16) has been updated to allow and utilize these functions remotely.

This update requires that the CINT Satellite software also be updated to version 6.16.

08/19/2015 – Update 1.24 (CINT Commander II v1.24 Program)
This update includes the addition of an upgraded HOBAS report creator. There were numerous issue fixes included in this version as it continues to grow in complexion and capability.

03/17/2015 - Update 1.08 (CINT Satellite v6.04)
This update includes numerous fixes along with several additions to the code. New faster streaming algorithms will allow audio streaming on older laptops. Pretext functions added. New Evidence Reviewer written and added (placed on Evidence CDs).   Additional functionality added to the Satellite Program.

The CINT Commander and CINT Satellite programs will both need to be replaced for this update.

02/23/2015 - Update 1.07 (CINT Satellite v6.02)
This update fixes several issues and adds a complete global attachment function to both programs. Any type of file can now be attached to the incident from either the CINT Commander program or any Satellite user. Attachments are noted in main log and saved to data CD at the conclusion of the incident.

The CINT Commander and CINT Satellite programs will both need to be replaced for this update.

February 2015: 836 Technologies releases the CINT Commander II (finally). The first software version is 1.04 (CINT Satellite v6.01). This version has no evidence reviewer (for save disks) and no Pretext Call abilities yet. These functions will come soon in updates.

Whenever updating, be sure to FULLY UNINSTALL any previous versions!!
